PUMPERTECH

Gauge on the phone, even with no signal.

PUMPER is software for oil and gas operators, from 10 wells up. Pumpers gauge on the phones they already carry, and your office sees every well on one screen.

$10
per well, per month

Everything
that's built today, one plan

Your whole team
gets logins at no per-user charge

A one-time setup fee of $10 a well, shut-in wells included. The lowest monthly bill is $100, for 10 active wells. Shut-in wells are $2 a well, per month, on top of that. Plus applicable sales tax. Month to month, with no long-term contract. If you cancel, your data is free to download through the end of that month. For 90 more days after that, a complete copy is $10 a well, shut-in wells included. Then your data is deleted.

1

At the tank.

The pumper enters the top gauge and color cut. PUMPER turns them into barrels with that tank's own strapping.

2

On the road.

Open PUMPER with signal that morning, then keep gauging with none. Readings save on the phone and send when PUMPER is open and back in range.

3

In the office.

Your office sees every well, two days side by side, with totals, downtime, live routes, and Excel export.

In the field

- ✓ Tank gauges with each tank's own strapping
- ✓ Color cuts, oil on hand, and BS&W in tanks
- ✓ Tubing pressure, casing pressure, and gas in mcf
- ✓ Water meters on disposal and injection wells
- ✓ Run tickets and water tickets
- ✓ Comments and downtime reasons

Checks as you enter, with signal

- ✓ Warns on a tank near full
- ✓ Asks when a tank drops with no load
- ✓ Asks when a load looks on the wrong side of the gauge
- ✓ Catches a cut higher than the top gauge

In the office

- ✓ Every well on one screen, two days side by side
- ✓ Live routes, with who's done and what's in
- ✓ Downtime with estimated barrels lost
- ✓ Well history and decline forecast
- ✓ Dashboard PDF to print, Excel export on most screens

Your team

- ✓ Pumper, office, and viewer logins
- ✓ Route order and relief routes
- ✓ A record of who entered or changed each day's numbers
- ✓ Nightly backups, checked every morning
- ✓ Works on iPhone or Android

Switching is side by side.

We load your history and tank charts. You keep your current system running next to PUMPER and switch when your office says the numbers match.

Built inside a working operator's field office.

Anything that would change your reported barrels is explained in plain English first and waits for your office's OK.

See it for yourself. Email **hello@pumpertech.com** for an online demo of about 20 minutes.
